How can SAP® solutions enable you to change the game?

SAP solutions help military organizations with asymmetrical and shifting threats by enabling them to marshal forces and adapt to meet immediate challenges. A full spectrum of planning and operations is available on an open architecture with networked real-time information to make interoperability, force generation, and deployment possible.

What do SAP solutions help customers do?

**Force generation**
- Use a capability-centric table of organization and equipment for planners to generate forces quickly.

**Force deployment**
- Coordinate organizational, personnel, material, and financial processes for operational deployment.

**Interoperability and information sharing**
- Remove data silos and correlate data from multiple domains to achieve mission efficiency.

What are the benefits?

With SAP software, defense and security organizations can deploy appropriate forces as and where needed, leveraging available resources optimally. They gain through:
- Agility to execute immediately based on precise, detailed plans and real-time data
- Ability to plan military structures that integrate into command and control systems
- Thorough planning of force structures that cover all arenas of action
- Comprehensive support of integration scenarios to command and control information systems

Why SAP?

SAP offers a comprehensive, tightly integrated portfolio of solutions for defense and security to digitally transform the organization. The software helps the military focus on key processes and activities to fulfill its missions efficiently, at home and abroad.

Key facts

- **Mission readiness**
  - +40%
  - With force generation, deployment, and interoperable support*

- **Impact**
  - +36%
  - On cost reduction with integrated software and common master data*
