

# FAST-Food™

SAP S/4HANA based template for the food industry by delaware

## THE SOLUTION

To achieve growth and innovation goals, small and medium sized enterprises need a platform that speeds up their business processes and simplifies decision-making. To answer these needs, Delaware developed FAST-Food™, a comprehensive ERP template, based on the latest **SAP S/4HANA technology**.

The template contains **best practices**, acquired during 18 years of expertise and active presence in the food industry. More than 35 companies are successfully using FAST-Food™. Through a proven methodology, companies are introduced in a level of performance.

FAST-Food™ covers the **end-to-end process chain**:

- Better specification Management with a link to GSI
- Faster receipt through scanning of supplier labels
- Smart contracting for fresh products and private label packaging
- Optimal production with focus on resources and OEE monitoring
- More efficient warehouse and transport operations
- Better customer fulfilment
- Optimal cost prediction and margin attainment

The **key to success** is not in the features of the solution, but in the **best practice** use of it.

## VERTICAL INDUSTRIES COVERED

- You can sequence production orders according to the color of the chocolate
- You can assure traceability when consuming mixed batches of liquid chocolate
- You can align packaging orders based on the periodic planning of semi-finished products
- You can buy a specific chocolate in solid or liquid form, as a call-off of one single purchase contract line

- You can start production of fresh bread before you received all customer orders for the next day
- You can sequence production orders according to the presence of allergens, such as almonds
- You can assure that purchase contracts are aligned with private label packaging according to the open customer contract quantities

- You can register quality upon receipt and perform self-billing based on the quality received or on the net quantity after cleaning and sorting
- You can collaborate with farmers to optimize the cultivation and harvest planning
- You can take into account homogenisation lead-times, e.g. for freezing the produced products

- You can price customer quotations based on the actual situation of possible sources of supply
- You can manage silos and avoid that theoretical remainders of batches are kept when silos are confirmed to be empty
- You can manage sales in bulk format, big bags or consumer products

- You can plan milk collection and perform self-billing to farmers based on local regulations
- You can assure homogenization before derived products can be delivered to customers
- You can manage expiration lead-times of fresh components when planning production
- You can manage excise declarations

- You can manage batch specific characteristics and assign or mix batches according to customer preferences
- You can monitor quality and traceability throughout the production steps
- You can deliver certificates of analysis upon customer delivery

- You can manage bulk and big bag supply towards production silos
- You can manage blends and strive for optimal mixes
- You can subcontract operations such as decaffeinating or packaging

- You can manage the purchase receipt in pieces and weight
- You can push fresh products to distribution centers or shops
- You can combine ERP data with weight of individual consumer portions when printing labels

## IMPLEMENTATION\* AND PRICING PLAN

Employee range	Implementation time	Implementation cost (services)	Implementation cost (licences)
<ul style="list-style-type: none"> <li>• Starting from 50 FTE</li> </ul>	<ul style="list-style-type: none"> <li>• Starting from 26 weeks</li> </ul>	<ul style="list-style-type: none"> <li>• Starting from €150K</li> </ul>	<ul style="list-style-type: none"> <li>• Starting from €35K</li> </ul>

Different deployment models are possible. Please contact us, to discuss which model is the best fit for your organisation
