

FAST-Automotive™

SAP® Qualified
Partner-Packaged Solution

SAP based template
for the automotive and manufacturing
industry by Delaware

The Solution

Agile and efficient processes are key if you want to stay ahead of the curve in the automotive and manufacturing business. In order to bring those capabilities within reach of small and medium-sized enterprises (SMEs), Delaware has developed **FAST-Automotive™**, a fit-for-purpose **ERP** template based on **SAP S/4HANA** technology.

FAST-Automotive™ is brought to you **through a proven project methodology** taking into account the specific capabilities and constraints of an SME. The template offers **advice**, based on our 15 years of active presence and industry-specific knowledge in the automotive and manufacturing business. More than 30 companies already rely on FAST-Automotive™ to drive their process excellence.

At Delaware, we are continuously challenging ourselves to further improve FAST-Automotive™, building on new project insights, emerging industry trends and technological innovations.

FAST-Automotive™ covers the **end-to-end process chain**:

- Logistics automotive process
- SCM automotive process
- Subcontracting
- Labelling, returnable packaging
- Suppliers and customers EDI
- Galia, ODETTE, VDA, ANSI X12 requirements
- JIT – JIS process
- Optimal cost prediction and margin attainment
- Interdiv, intercompany process
- International legal requirements

However **the key to success** does not lie in a solution's features, but rather in the best possible application of the solution within a project-specific context.

FAST-Automotive™ is certified by Galia to respect tier1 OEM requirement (EDI, labelling, delivery note ...)

VERTICAL INDUSTRIES COVERED

AUTOMOTIVE SCM FLOWS

- You can procure goods managed by EDI with purchase orders and schedule agreement.
- You can plan with production order process, repetitive manufacturing process, lean manufacturing process, Kanban, long term forecasting planning.
- You can deliver OEM and tier 1 and respect logistic OEM guidelines.
- You can manage direct delivery flows, Xdock, MAF, Consignment stocks
- You can assure tracability, labelling and relabeling
- Returnable packaging and alternative packaging
- Self-billing

EDI

- You can support suppliers edi flows (inbound and outbound).
- You can support customers and carriers EDI flows (EDIFACT, ANSI X12, ODETTE, VDA, DELFOR, DELJIT,...)
- EDI mapping for the mane OEM (PSA, RENAULT, VAG, GM, VW, Daimler, BMW ...); about 250 mappings.

STANDARD AUTOMOTIVE LAYOUTS

- Delivery note : Liefersheim VDA4939, Galia IAE3.3.
- Invoice, purchase orders

LABELLING AND RELABELING

- You will have automotive and non-automotive labels : ETI9, ETI9-I, ETII small + large, VDA KLT and GLT...
- Configurable relabeling process, labels sorting
- You can manage excise declarations

RADIO FREQUENCY CONFIGURATOR

- You can configure your own radio frequency events without development.
- You can support reception, internal and production and shipping processes with radio frequency.
