# A **Transparent** View of Your SAP® Product Portfolio in One Place

THE BEST RUN

# A personalized access point to your entire SAP product portfolio

In today's 24/7 business environment, time is an organization's most precious resource. SAP for Me is your digital companion that makes it easier to interact with SAP. It's an advanced, easy-to-use portal that aggregates your important alerts, metrics, and insights from your SAP product portfolio into a single access point, using your user ID and your personalization settings.

SAP for Me is a single point of access for everything related to your SAP product portfolio. We understand that, due to varying information needs, the relationship between our users and their SAP product portfolio can be complex so we developed this single point of access to simplify and improve transparency for you.

If you need information about your products or related incidents, details of your license compliance or simply more knowledge about a product, SAP for Me is where to look. It makes disparate information a thing of the past by ensuring you can find everything you want to know about your portfolio in one place.

**A personalized access point to your entire SAP product portfolio**

# Access and act on important role-relevant parameters

The SAP for Me journey begins at the intelligent home screen. Here you can find an overview of alerts, metrics, and insights from your SAP product portfolio that perfectly map to your needs according to your role-based interests. Next you can drill down into further detail to better understand your business and gain insight as to why an alert was triggered. SAP for Me can help you to take action from here too.

While it is critical for you to understand the state of your product portfolio, deciding what is most important depends on the role of the person looking at it. SAP for Me ensures that you can quickly and easily gain a holistic view of your software environment as it pertains to your role.

Most users might take the list of products associated with their user ID to start their exploration. For example, a user with an interest in support might start with the status of support tickets. A business owner might like to start with an understanding of upcoming events like scheduled downtimes or license renewals while someone working in finance might start with a license and consumption perspective. If you are interested in enabling your peers with a certain SAP product you could start with learning journeys related to this product.

SAP for Me can tell you how many trainings have been started and completed to date.

## Access and act on important role-relevant parameters

## Gather data from a single access point

Before SAP for Me was developed, obtaining a comprehensive view of your business or product portfolio required logging into multiple access points. This meant there was a clear need for a portal that could give you an easy and quick understanding of how your products were adopted and were performing. SAP products that go underutilized, or unused, not only make an organization less efficient but have a detrimental impact on the ROI of the organization's SAP software investment.

By bringing product, license, incidents, and training information into one place and connecting the dots between these metrics, SAP for Me allows you to develop a better understanding of how to maximize the value you get from your software and your investment.

SAP for Me makes a user's life better. Rather than constantly jumping from one access point to the next to find information, execute a decision, or determine what training is needed, SAP for Me eliminates the need to move between products by giving you full visibility from just one place.

**Gather data from a single access point**

SAP for Me gives you all the **business and product information** you want, fully personalized, and all in one place.

### Summary

SAP for Me is your digital assistant that helps you to see more detailed information about your SAP products and to see how efficiently your business is supported by these products. It also gives you the ability to take action immediately without having to use multiple access points.

### Objectives

- Find information and complete tasks without the need to log into multiple products or systems
- Receive information about the status of your entire SAP product portfolio
- Discover relevant online training for your SAP products

### Solution

- Free, cloud-based solution available to all SAP customers
- Single point of access to review, and act on, detailed business information, product information (including license, systems, orders, and incidents) and training information

### Benefits

- Enhanced transparency into your existing SAP portfolio
- Helps expedite effective decisions with a single source of truth
- Easier access to data and trainings, increasing the ROI of your SAP investment
