SI2S4 YOUR WAY TO SAP® S4/HANA

S/4HANA is not only a new SAP ERP platform. The combination of performance improvements, real time analytics and new functionalities gives customers opportunity to build the roadmap to transformation of their business and provides significant process innovation. Taking into account that the SAP mainstream maintenance for SAP ERP ECC will be provided only till 2025— your organization needs to be ready for a significant change. To let you enter into the S/4HANA world quickly and easy — SI-Consulting is providing ready to use, packaged S/4HANA conversion scenarios, based on our own SI2S4 Methodology.

TRANSITION SCENARIOS

There are two different approaches to S/4HANA migration. If you are still using SAP platform implemented more than 10 years ago, with plenty of custom-code developments, your business or your organization has changed significantly, we probably need to think together about new implementation (“Greenfield”). If you are more interested to make your first move quick and cost effective, jump on the new S/4HANA platform, and then start to innovate using it’s unique capabilities - we are offering you conversion scenario (“Brownfield”).

Greenfield
new implementation

Brownfield
system conversion

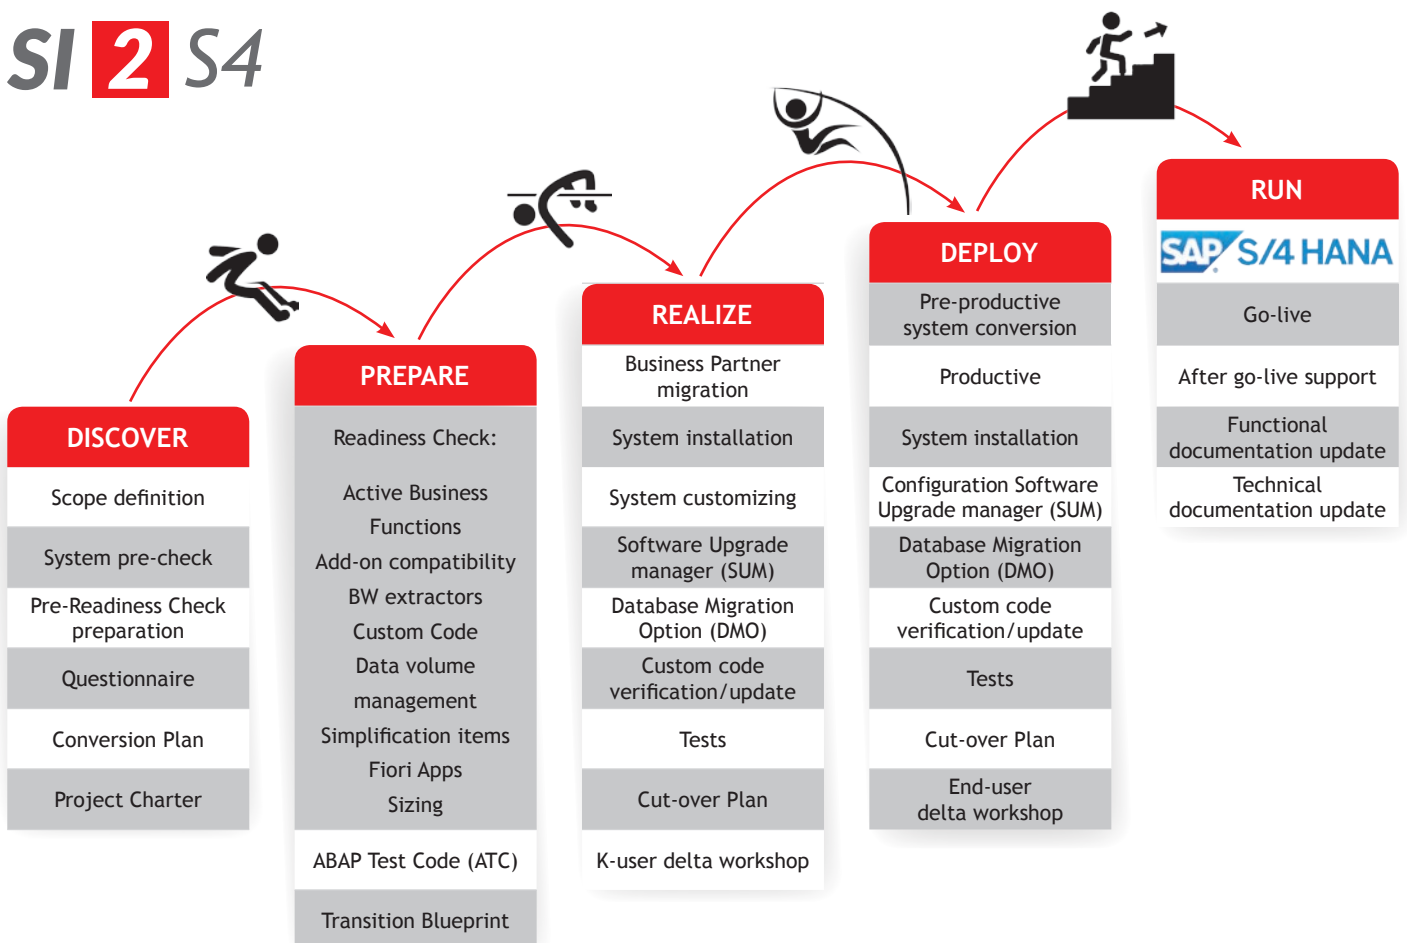

HOW DO YOU PERCEIVE YOUR CURRENT SYSTEM? DOES IT LIMIT YOUR ABILITY TO INNOVATE?

- Need to execute significant business process changes
- Want to simplify the business process
- Need to remove non-standard customizations, ineffective custom code and developments
- Existing ERP platform struggles to support the business
- Users are „working around‘ the ERP solution rather than with it
- Too much technical debt to clean-up - one step migration not possible
- Taking advantage of all new functional options up front

- Current ERP infrastructure supports business needs well enough
- Phased roll-out of innovations over time in line with business requirements expected
- Minimize change management
- Focus on new innovations
- Current investments protected: Business process set up, customizations, enhancements, custom extensions
- Need to keep historical data

We have created SI2S4 Methodology to be able to make your jump on S/4HANA platform possibly simple and effective. We defined own accelerators to simplify implementation process like methodology kit, dedicated tools for business partner migration, automated tests or predefined ready to use Fiori Apps. We will follow this steps together with your team.

SI 2 S4

SI2S4 - ADDITIONAL SERVICES

 Custom code migration	 Business process reimplementation	 Hardware delivery
 Interfaces migration	 SAP Authorizations	 SAP Hosting
 Workflow implementation	 Migration of Industry solutions	 Infrastructure outsourcing
 Forms reimplementation	 S/4HANA ad-on's implementation	 Security audit
 SAP Query migration	 SAP Licensees migration	

KEY BENEFITS USING S/4HANA:

- Better insight for business users
- Improved productivity
- Simplified data model
- Real-time analytics
- Business process simplification
- New. More effective processes for mass-data processing (month close, MRP live),
- Almost 3000 innovations delivered in S/4HANA - still growing
