Why industry leaders are moving NOW from ECC6 to SAP S/4HANA.

Being now the market standard, SAP ECC6 isn't providing you any longer the competitive edge your company needs. It makes sense to start taking advantage of the real-time business data and industry best practices, which are embedded within S/4HANA.

[Starting the process now means](#) you can stand ahead of the competition and also better overcome any roadblocks you could hit due to custom code or legacy data issues. So, contact us soon to beat the rush and not get lost in the stampede of late adopters.

What ROI can you expect with SAP S/4HANA?

In our experience, customers typically achieve:

25-30% decrease in inventory levels: using machine learning of actual order volume, predictive analytics will create inventory buffer levels to ensure [availability](#).

10-30% increase in on-time delivery: delight your customers by tracking goods in transit and optimising routes by [analysing vehicle and sensor data](#) through innovative technologies only possible with SAP S/4HANA

10-15% decrease in revenue loss due to stockouts: by improving flexibility through fast and responsive production planning scenarios.

10-40% improvement in invoice processing productivity: automation eliminates manual errors and makes invoice verification more consistent through machine learning and matching.

Birchman's SAP S/4MoveWorks[®]. De-risks your move and maximises the value

S/4MoveWorks by Birchman is an SAP Qualified Partner-Packaged solution that brings together the business outcomes with the technical solution, an enhanced Birchman methodology, additional tools and specialised resources at a fixed price. This makes it
